

Charter Business® Optical Ethernet

Reliable, Affordable Metro and Long Haul Optical Ethernet Service

» WHAT IT IS

Charter Business® Optical Ethernet service offers reliable, ultra-fast Ethernet connectivity with speeds ranging from 10Mbps up to 10Gbps. The service offers metro and long-haul connectivity and point-to-point, point-to-multipoint or multipoint-to-multipoint configurations.*

» ONLY PAY FOR THE BANDWIDTH YOU NEED

Unlike traditional switched services that require you to upgrade from 1.5Mbps to 45Mbps with nothing in between, Charter Business Optical Ethernet allows you to scale your bandwidth in 10 or 100 Mb increments so you only pay for the bandwidth you need.

» METRO AND LONG-HAUL CONNECTIVITY

The Charter Business Optical Ethernet Service allows you to link business locations within a metro area as well as offices dispersed across the country. Metro connectivity is available for all network configurations while long-haul connectivity is available for point-to-point and point-to-multipoint configurations. Customers who require a multipoint-to-multipoint long-haul connectivity should consider Charter Business Layer 3 VPN Service.

» COUNT ON US

Charter Business Ethernet service is built for reliability and configured to meet the performance standards ratified by the Metro Ethernet Forum (MEF) industry group to provide carrier-class Ethernet performance.

Our network is exclusively managed and operated by Charter Business. We constantly monitor the network from our Dedicated Charter Business Network Operations Center 24/7/365. Our commitment to reliability is why our network is trusted by numerous enterprise customers to carry their mission critical traffic.

» MULTIPLE SERVICE TYPES AVAILABLE

Charter Business Ethernet service offers generous bandwidth with three flexible configuration options, allowing you to build a tailor-made high-speed data network.

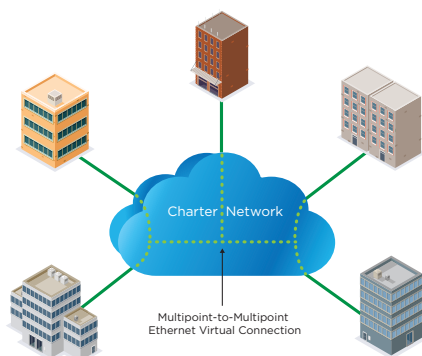

» EPL

A point-to-point Ethernet Private Line (EPL) configuration offers a committed information rate connection to connect both metro and long haul optical locations. It also offers control, allowing you to configure the connection to carry data and voice traffic, as well as other IP applications to suit your needs. As such, it is ideal if you want full control of your network with the simplicity of a point-to-point connection.

» EVPL

If you need a point to multipoint connection to link a central headquarters or data center to multiple offices, your best bet is Ethernet Virtual Private Line service (EVPL). In addition to offering multipoint connectivity and hub and spoke configuration, EVPL doesn't require you to hire dedicated IT staff to manage it. Instead, Charter Business will handle the configuration and management of the connections based on guidelines you set.

» E-LAN

The multipoint-to-multipoint Ethernet LAN (E-LAN) service offers the ultimate in flexibility, connecting all locations to create a secure, shared-data network. It can also mix in point-to-multipoint connections, allowing you to route traffic securely between any endpoints. For that reason, E-LAN may offer an enterprise the greatest degree of network flexibility.

Charter Business knows how important network reliability is, so we offer service attributes that address network performance levels and response thresholds.
